

Specifying ASSDA Accredited Fabricators

“from paper . . .
. . . to perfection”

3rd Edition

ASSDA
ACCREDITED

“For fabrication involving the use of stainless steel product of any grade, organisations which are ASSDA accredited or equivalent shall be used. Evidence supporting knowledge and competence must be supplied where it is proposed to utilise a non-ASSDA accredited fabricator.”

ASSDA ACCREDITED FABRICATORS

The ASSDA Accreditation Scheme raises the standard of stainless steel fabrication quality in Australia by providing asset owners and specifiers with a greater certainty that applications using stainless steel will be performed by technically competent industry specialists.

THE ACCREDITATION SCHEME

ASSDA Accreditation is a powerful industry tool designed to recognise and promote best practice Australian fabricators to asset owners and specifiers.

Addressing the key issues involved with fabricating stainless steels, the Accreditation Scheme aims to provide a select group of pre-qualified expert fabricators to asset owners and specifiers, relieving them of the guesswork and potential risk of using an unknown fabricator.

The stainless steel industry has grown rapidly over the past two decades in Australia and internationally, outpacing other commodity metals significantly. This has given rise to many new entrants in the industry to meet with the increasing demand of the market.

Stainless steel requires specialist knowledge and practices to realise the full potential of this incredible material. This is truer today than it has ever been. The reason being is that stainless steel prices have

reached record highs and it is imperative that fabrication is done by industry specialists to ensure that projects are completed to a high standard first time, every time.

When stainless fails due to poor workmanship it not only reflects poorly on one area of the supply chain but the entire industry.

ASSDA ACCREDITED FABRICATORS

Selecting an ASSDA Accredited Fabricator for a project is the best way to minimise the risk of failure and achieve the most cost effective outcome.

ASSDA evaluates applicants on several key aspects integral in producing high quality stainless steel fabrications. The areas scrutinised include;

- Quality control procedures
- Safety management
- Workshop capability
- Contamination avoidance
- Training systems

Further there is also a comprehensive *Knowledge Statement* that takes an in-depth look at the stainless specific knowledge held by the organisation.

Current industry categories of Accreditation include, *Light Commercial, Architectural, Food, Dairy & Beverage and Heavy Industrial*, all of which have tailored *Knowledge Statements* to provide a broader, yet specialised range of fabricators for specifiers to choose from.

BECOME AN ASSDA ACCREDITED FABRICATOR

If you would like to stand out in the crowd, improve your business or be recognised for your high quality of work, don't hesitate contact ASSDA now.

SPECIFYING AN ASSDA ACCREDITED FABRICATOR

Asset owners and specifiers are encouraged to state a preference for ASSDA Accredited Fabricators in specifications by using the following set of words in all specifications requiring stainless steel.

For fabrication involving the use of stainless steel products of any grade, organisations which are ASSDA Accredited or equivalent shall be used. Evidence supporting knowledge and competence must be supplied where it is proposed to utilise a non-ASSDA Accredited Fabricator.

ASSDA can also assist in other areas in the specification of stainless steel, contact ASSDA to find out more.

FIND AN ASSDA ACCREDITED FABRICATOR

The *Stainless Steel Specialist Register* lists the current ASSDA Accredited Fabricators. It is freely available on the ASSDA website – www.assda.asn.au.

The Register is frequently updated with New Accredited Fabricators – check the website for details and contact information of all the companies that have made the cut.

Whether you are a specifier, asset owner or a fabricator looking to benefit from the Scheme, phone (07) 3220 0722, email assda@assda.asn.au or visit the website.

Company Profile

Ancon designs and manufactures high integrity stainless steel components for a wide range of industries including Civil Engineering, Building, Infrastructure, Water Treatment, Nuclear and Mining.

The company supplies projects world-wide ranging from small scale residential to major infrastructure projects. The larger projects require considerable material tonnage and have schedules that may span several years.

Company Profile

Our technical services are not just confined to our workshop. We can undertake off-site contracts such as large turn key projects, factory maintenance shutdowns and complete plant relocations.

We can design and manufacture anything from the smallest machine components for complex machinery to large industrial systems for bulk materials handling, mine dewatering and large processing applications.

Our team of design engineers, using some of the latest CAD equipment, including 3D, can design and develop cost effective practical means of achieving the required outcome.

Company Profile

Nepean Engineering was established in 1975 and now employs approximately 180 people in our Narellan facility. Our commitment to engineering excellence enhances our capabilities and enables us to offer customers a full range of product development, engineering manufacture, equipment refurbishment and turnkey and maintenance services.

Nepean Engineering operations include medium to heavy metal fabrication, structural steel and sheet metal, specialized stainless steel capabilities, CNC & general machining, tool and mould making along with design and construction of special purpose machinery. The type of work handled ranges from the very small job to multi-million dollar contracts. Operations are supported by extensive design facilities through to shot blasting, painting and powder coat finishing.

Nepean Engineering is the founding member of the Nepean Group, Australia's leading, privately owned, diversified engineering and industrial manufacturing conglomerate. Group capabilities are diverse, manufacturing and marketing products to customers in the Mining, Aviation, Transport, Agriculture, Manufacturing, Residential, Commercial and Industrial Construction, and Food Production sectors. Nepean Group operates in international markets in the USA, Canada, Middle East, Africa, Asia and Australia.

Company Profile

Universal Engineering combines its drafting, CNC plasma, machining, and large pressing capabilities, all located in our modern 1 Ha facility. Providing a complete service to the construction, mining, infrastructure, petrochemical and offshore oil and gas industries.

Using modern welding and fabrication equipment, projects are carried out by an experienced and innovative workforce of fifty, with a high dedication to safety and all supervised by WTIA inspectors. Universal Engineering has also implemented ISO 9001 management systems and has attained Accreditation to the European Welding Federation to ensure the highest quality assurance and material traceability.

By combining all of the above systems with our installation service, we can provide packaging of skid mounted and pre-assembled modules as complete units tested and documented as assemblies for direct transport to site and installation.

Company Profile

Affordable Stainless Products Pty Ltd manufactures and installs stainless steel benchtops and sinks in existing cupboards or with additional frames and shelving if required. We also manufacture stainless steel and galvanized steel handrails with wire balustrade and painted or galvanized stair stringers, for use in commercial, residential and industrial areas. We can also manufacture and install custom architectural works in stainless and mild steel.

We undertake maintenance work for QUT campuses in Brisbane, Conrad Treasury Casino, St. Andrews Hospital, University of Queensland, St. Lucia and Griffith University and are Q-Build Works Compliant, which allows for maintenance in

operational correctional centres. Builders we have worked for include: Watpac, ABI Group, Balderstone, Formula Interiors and Spaceframe, to name a few. We manufacture to all customers requirements in hospitals, correctional centres, schools, laboratories and research facilities.

Company Profile

Koolall is a hospitality fit-out company specialising in custom designed refrigerated cabinets and commercial kitchens. Since our establishment in 1979 we have designed, fabricated and installed hotel bars, kitchens, cafes and food outlets in locations throughout Australia and New Zealand.

Our reliable and competent team handles all facets of the design, manufacture, construction and coordination of any project. Where required, we demolish and remove existing fittings, or remove, refurbish and refit existing items. We are one of the very few shopfitters and sheet-metal fabricators that hold an Open Builders Licence.

We have dealt continually with leading construction companies, architects and design consultants and have consistently performed effective fit-outs for national and international franchises. Our long-standing contracts with master franchisers confirm our commitment to service, quality, reliability and value to clients.

As an Australian owned and operated manufacturer, we pride ourselves on completing our projects within deadlines, within budget and with minimal loss of trade and stress to the client.

Company Profile

Millatec provides precision machining solutions to industry sectors such as medical, defence, telecommunications, avionics, food & beverage and the tube making sector. We are equipped for R&D, prototyping, and selected production runs.

We are committed to quality and delivery with our slogan “No Excuses Just Results” and back this with AS/NZS 9001 certification.

Our highly skilled craftsman will manufacture high tolerance components from all standard material ranges. This includes all stainless steels, magnesium, titanium, invar, kovar and beryllium copper, while using the very latest in CNC technologies, including 4 & 5 axis machining centers and the very latest in turning centers. Internal design can be undertaken with reverse engineering drawings also made.

Millatec prides itself on its advanced machining capabilities; often selected because of its right first time approach and we take on the parts other companies won't. Customer care, feedback and communication have made Millatec the company of choice.

Company Profile

Paige Stainless Fabrications of Queensland Australia is a leading supplier in Heelguard grating systems. Supplying the architectural, plumbing and building industries with complete drainage systems, meeting the demands from the top end of the market to architectural walkways and industrial platforms.

Our unique drains are fabricated from stainless steel wedge wire offering maximum hydraulic characteristics, along with superior rubbish retention at surface level, an ideal situation for surface water drainage. The PAIGE STAINLESS HEELGUARD®™ system also has safety advantages as high heel shoes can not penetrate the 5mm gap grate, greatly reducing the risk of injury.

Paige Stainless now exports internationally reaching markets such as the Middle East, USA, Asia, New Zealand, and Europe via our marketing arm Heelguard Grating Pty Ltd.

Company Profile

Southern Stainless Pty Ltd has been established on the Gold Coast for 20 years. Our team is experienced in all aspects of Stainless Steel Fabrication from design through to the final product.

In keeping with the exceptional service offered, the Southern Stainless factories are divided into five departments so as to ensure the quality of service that our clients have come to expect within this industry. These departments are Marine, Architectural & Commercial, Polishing, Barbeques and Marine Davits.

While the company's specialty is one-off custom made products, it is also geared for mass production of products such as our signature range of Cookout Barbeques and accessories.

Company Profile

Handrail & Balustrade Fabrication Pty Ltd are specialists in the supply and installation of stainless steel custom fabricated handrails and balustrades. We cater for both large and small projects in both the domestic and commercial sectors, including renovations in stunning new homes through to major commercial projects, such as the newly opened Adelaide Airport, many schools, universities, function centres, hotels & restaurants.

We have developed many of our own products including balustrade types and styles, handrail solutions, including our range of stainless steel brackets, patch fittings for glass applications, furniture including tables and have developed our own range of DIY "Nautical Balustrade Kits".

Company Profile

Crown Stainless is a medium-sized manufacturer, supplying high quality fabricated stainless steel products to customers in the Dairy, Beverage, Food and related industries around Australia.

From small beginnings in 1999 with three staff, the company now employs a total of 18 staff at a well appointed 1500 sq metre workshop in Dandenong. The workshop has a 16 tonne gantry crane, 2 x 3 tonne monorail cranes, a 4 metre long 160 tonne CNC press brake, a 3 metre guillotine, a 6 tonne tank rollers and dimpling equipment. The workshop has good access from the South-Eastern Freeway.

Our experienced team of stainless steel fabricators, are able to supply competitive quotations and high quality work, from one-offs to larger production runs to suit our customer's requirements.

Company Profile

Since 1982 Hart to Hart have been manufacturing and developing stainless steel products for the bakery, dairy, food, marine, architectural, wine, brewing, transport and industry sectors. From design to manufacture including polishing, glass beading and turnkey operation capability.

Expanding its horizons in 1993 forming two new divisions the first of these was Kathro Products, which started with the innovative creation of the stainless steel rainwater tank - Raincatcher. Raincatcher grew rapidly and was soon followed by the stainless steel Leaf diverter, an inlet strainer for water tanks. Kathro products were created to provide these and future products to the domestic market.

The second division set up was Geosan Products, which deals with the construction of equipment for the wine and brewing industries. Like everything else at Hart to Hart, all the tanks, barrels and equipment are made entirely from stainless steel.

Company Profile

Diverse Welding Services Pty Ltd is an innovative West Australian based company that specialise in the supply, manufacture and installation of equipment for the pharmaceutical, food and beverage, oil and gas, water treatment, mining and medical industries.

We are currently supplying our standard products and specially requested items throughout Australia and overseas.

At Diverse Welding Services the emphasis is on quality, service and ensuring that customer satisfaction is achieved through individual design and custom manufacture. Our welders and fabricators weld to National and International standards and our company has the facilities to produce preliminary drawings for our clients, through to approved-for-construction drawings in AutoCAD format. By utilising this we can ensure the client will be getting exactly what they require.
