

ASSDA Accreditation

An initiative of the Australian
Stainless Steel Development Association

Stainless steel is different. It requires specialist knowledge and practice to ensure the marvellous properties of stainless steel are able to show themselves.

ASSDA Accredited Fabricators have been assessed for this knowledge and commitment and meet the high standard set by recognised best practice in the industry.

An ASSDA Accredited Fabricator gives asset owners and specifiers greater certainty of high quality service.

Experience

All ASSDA Accredited Fabricators have demonstrated experience in quality stainless steel fabrication over many projects or installations.

Knowledge

They have detailed knowledge of accurate fabrication techniques, supply chain issues and a range of stainless specific procedures that deliver quality and maintain the performance of stainless steel long after the job is complete.

Quality

There are quality systems appropriate and sufficient for the type of fabrication, and the end use of the job.

Specific steps are taken to avoid 'contamination' and other flaws common with poorly executed fabrication.

Training

ASSDA Accredited businesses are 'learning organisations' that provide specialist training for their workforces in stainless steel specific and other relevant disciplines.

Choose an ASSDA Accredited Fabricator

Selecting an ASSDA Accredited Fabricator for your job is the best way to minimise your risk of failure, get the most accurate information about stainless steel for your job and achieve the most cost effective outcome.

Accreditation is offered for fabrication and installation services for the following applications:

- Light commercial
- Heavy industrial
- Architectural
- Food, beverage and pharmaceutical
- Pressure

Check the ASSDA website *Stainless Steel Specialists Register* for the status of your ASSDA Accredited Fabricator - www.assda.asn.au
